

Igniters for Rocketry

The Elementary Science Program has received questions about the two different types of igniters included in this year's Rocketry unit. Both types are slightly different from the igniter described in the Teacher's Guide.

The first type comes with the motors. Instructions on installing this igniter are included with the motors.

The second type are replacements in case of misfires or damage to the first type. Instructions on installing this igniter come with this notice.
